PROFILE

Fullstack Web Developer with a passion for making people's lives easier through technology. With experience in JavaScript, React, Ruby on Rails, and a background in Architecture, I bring strong skills in collaboration, adaptability, and client relations. As a gay woman, I see the importance of inclusivity in the development of the tools and technologies that we all use. I truly believe that tech should be by everyone, for everyone.

TECHNICAL PROJECTS

Rita – Slideshow | Demo
Prototype for an app that helps caregivers communicate with each other and keep track of appointments and medications

- Collaborated with team to design and build a prototype
- Managed the team from conception to presentation
- Winner of the "People's Choice Award" at LYLAS Labs: Women at Work Hackathon

Trip List – Github | Demo
A website where users can add recommendations of things to do on upcoming or previous trips

- Designed and built front-end using React, Redux, HTML, CSS, and Semantic UI React
- Utilized JSON web tokens and local storage to store encrypted user information
- Designed and built back-end using Ruby on Rails

Blobbers – Github | Demo
An interactive JavaScript SPA where users gain points by grabbing blobs of similar color, or lose points by running into the falling rain

- Utilized P5.js to create user "sprites and visual elements
- Used vanilla JavaScript for all user functionality

EMPLOYMENT HISTORY

Writer/Proofreader at TrustForte Corporation, New York, NY
November 2017 – Present

- Analyze documentation to write 15 educational and professional experience evaluations per week of clients' qualifications for IT positions
